

Outdoor Lighting

Looking to add a motion sensor to the front corner of the carport and an additional fixture in the car port. Existing switch controls porch light light fixture is end of run supplied by two wire.

Would like to add a motion sensor (20 feet away on corner of house facing driveway to control existing fixture and a new fixture mounted to light the car port.

Is this possible? If so, I assume I'll need three wire exterior grade. Can you provide wiring schematic??
