

# UMBRELLA RESTRINGING INSTRUCTIONS

1. Close umbrella and remove from the holder pole.
2. Remove canopy & vent top.
3. Place umbrella on a table with the crank handle facing down.
4. Using a Phillips head screw driver, remove the 2 bolts on either side of the crank handle. (Be careful that the gear and the tear drop shaped "click" stay in their original positions).
5. Cut the end of the rope near the knot so that you may completely remove the crank.
6. Leave the remaining rope dangling from the crank handle hole, making sure that the rope does not go into the pole.
7. Go to the top of the umbrella where the rope is knotted into the ball.
8. Gently pull the ball down enough to cut the rope. (Be careful not to pull the rope from the crank handle hole).
9. Lay the ball & cone to the side and attach the old rope to the new rope by fusing with strong adhesive tape, or by melting ends together with a lighter.
10. Return to the rope in the crank handle hole and start pulling the rope through very gently. (Be careful and assist rope when going over the bends and pulleys.) If ropes should separate, the new rope may be retrieved by using a wire hook on one end.
11. Before you pull the rope through completely, return to the top of the umbrella and put the cone and ball back into place. Tie your knot.
12. Restringing is complete when the new rope is hanging from the crank handle hole.
13. Thread the new rope through the hole in the crank handle bolt and tie the knot.
14. Re-assemble the crank back to the original position being careful that the plastic collar inside of the pole remains in place
15. Umbrella restringing is finished! Return the umbrella to the holder pole and test by cranking up and down, replace the canopy & vent top and you are ready to enjoy another day in the shade!
